

MARKSHEET GENERATOR

ABSTRACT

In today's world everything becomes automatic; most of us use automated software for most of the things like wise marksheet generator has also become automatic. This mini project is a software tool for marksheet generator. In this, we enter the student's personal details, student internal marks, student external marks based on the internal and external marks whether the student has scored pass mark or not and it generates the marksheet based upon the marks.

INTRODUCTION

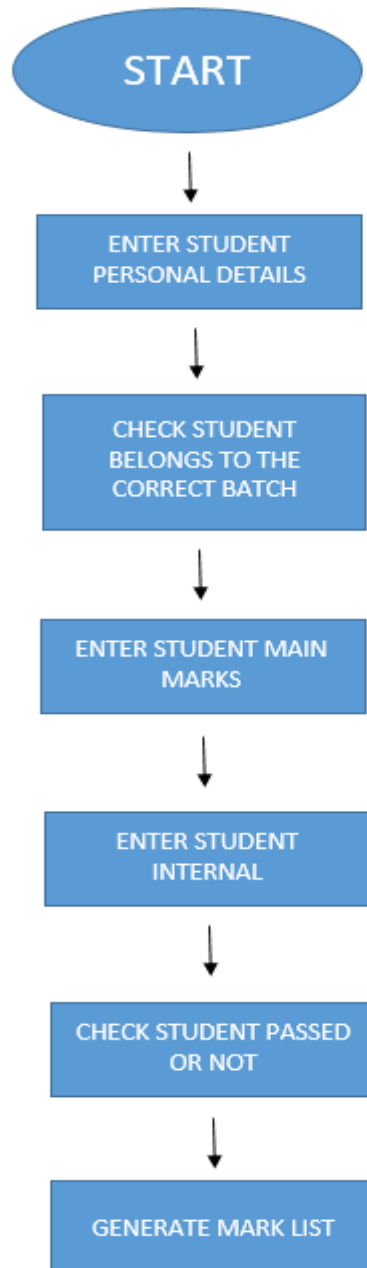

Today, there are lots of colleges and schools present, and it is increasing each day. So, it is becoming difficult to check the exam copies of each student correctly within the prescribed time. To overcome this problem, we are going to build a mark sheet generation system which will check the answer copies of the student and also generate the mark card of each student. By use of this system a University, Colleges, and School will get the benefit and can produce the result of students with minimal error and in minimum time. Existing

In the current mark sheet generation system, the University has to spend much time just to arrange the copies of the students. While, after arranging they have to spend the time to get the copies checked and then they produce the result. All this process only consumes time and requires huge manpower. Each year there is news about some University that copies have not been checked correctly. The money that a University spends is large, but the result which comes is not up to the mark and because of this they need some system which can reduce all the problems and can provide the best output.

Proposed system: Automation of mark sheet generation will reduce the time to create the mark card of the student. The University only needs to upload the exam copies to the system and then the system will complete the rest of the work. This application can check all the papers and can produce the result. Computers are much faster than humans, and hence it will take less time to produce the result. The University management can also change the procedure to produce the result if they want. The automation of mark sheet generation system will not only reduce the time but it will also reduce the cost as the number of persons required is less.

Mark sheet generation Module Admin: The University, college or school management who is responsible for generating the marks sheet will be the admin. They will observe the work process and can stop the system if there are any problems.

PROPOSED FLOWCHART

From the above flow chart it is shown that the students personal details like name,college,dob are collecte and internal,external marks are collected and then it is processed and checks whether the student passes or not and then it generates the mark list based on the above given details.
